

UnitedLayer for Oil & Gas

Secure software-defined private cloud with AI-ready acceleration and built-in intelligence for upstream, midstream, downstream, field operations, and energy data environments.

Helping oil and gas organizations modernize operations with resilient private cloud, secure edge-to-core connectivity, AI-ready infrastructure, and unified observability and orchestration.

Where **UnitedLayer** Helps Oil & Gas Organizations

Key solution areas for exploration, production, transport, refining, and distributed energy operations.

Remote Field & Edge Operations

Run applications and services close to where data is generated—securely and reliably.

Seismic & Data Platforms

Accelerate seismic processing and large-scale data workloads with high-performance cloud infrastructure.

SCADA / OT Infrastructure

Modernize OT systems with secure, available platforms designed for real-time control and operational continuity.

Pipeline & Asset Monitoring

Monitor pipeline integrity and critical assets in real time with IoT and edge-to-cloud visibility at scale.

Refinery & Processing Workloads

Run demanding applications and data-intensive workloads with performance, reliability, and cost optimization.

Cybersecurity & Zero Trust

Protect critical IT and OT environments with Zero Trust security and integrated threat defence.

Business Continuity & Disaster Recovery

Ensure resilience with automated backup, rapid recovery, and geo-redundant architectures across the value chain.

AI-Powered Analytics & Optimization

Leverage AI/ML to predict outcomes, optimize operations, and drive faster decisions.

Oil & Gas Solution Snapshot

Modernizing distributed energy infrastructure with secure, scalable private cloud.

Energy organizations operate in some of the world's most demanding environments. To compete and stay safe, they need secure, modern infrastructure that connects remote operations, improves visibility, and supports resilient, data-driven operations across the value chain.

Business Need

- Connect and manage remote assets and sites
- Protect critical OT and IT infrastructure
- Improve data visibility and operational insight
- Support scalability across exploration, production, and midstream operations
- Ensure business continuity in high-risk environments

Solution Delivered

- Secure private cloud foundation built for energy
- Unified platform connecting IT, OT, and edge
- Built-in security, governance, and compliance
- Scalable infrastructure for data, apps, and AI
- Resilient by design with built-in backup, DR, and cyber recovery
