

Cloud that belongs to you, wherever you operate.

A dedicated, single-tenant private cloud for **government agencies, enterprises, and regulated industries** that cannot compromise on where data lives, who can access it, or which laws govern it.

Operate

THREE DIMENSIONS OF SOVEREIGNTY

Data sovereignty

Your data is subject to the laws of the country where it is stored, and only those laws. No hyperscaler access, no cross-border replication without consent.

Operational sovereignty

Always-on, always-in-jurisdiction. Critical applications stay resilient through regional disruption, with business continuity and DR built in.

Digital sovereignty

You own and control the encryption keys, the access policies, and the audit trail — with policy-as-code governance and full transparency.

WHAT'S INCLUDED

UPC Sovereign Core

- Fully managed private cloud at your sovereign-chosen location
- Aligned with GDPR, DORA, NIS2, BSI C5 and others
- Multi-hypervisor: VMware, KVM, Hyper-V, Canonical
- Built-in Observability, AIOps, and Agentic Orchestration

UPC Secure Multi-Cloud Orchestration

- Data sovereignty and policy enforcement across clouds
- Centralized policy-as-code with real-time audit visibility
- AI-driven workload placement and compliance automation
- One control plane for public, private, and edge

UPC AI-Optimized Sovereign Cloud

- Dedicated GPU clusters within your sovereign perimeter
- Pipelines for AI model training and inference
- Encryption in transit and during model training
- EU AI Act compliance mapping and data lineage

UPC HPC Sovereign

- Optimized infrastructure for compute-intensive workloads
- High-throughput interconnects inside the boundary
- Scalable architecture with dedicated storage tiers
- Certified for national security and critical infrastructure
